ASSENT OF ASSIGNEE

Honorable Commissioner of Patents and Trademarks
BOX PATENT APPLICATION
Washington, DC 20231

Sir:

In accordance with 37 CFR § 1.172, Cybex Computer Products Corporation, of Huntsville, Alabama USA, the sole assignee of the captioned patent, hereby assents to the filing of the continuation patent application (application number 10/032,325) in the United States Patent Office claiming priority from reissue application no. 09/228,747 (filed January 12, 1999) of the captioned patent.

Cybex Computer Products Corporation submits that it has ownership of the captioned patent for which reissue is sought, and in accordance with 37 CFR § 3.73 provides herewith documentary evidence of a chain of title from the original owner to the assignee. In this regard, the assignee attaches thereto true and accurate copies of the following:

PERHOLTZ, R., et al.
App Serial No.: 10/032,325

(1) Assignment dated January 12, 1994 from RONALD J. PERHOLTZ and ERIC J. ELMQUEST to Fox Network Systems, Inc., recorded in the US Patent Office on January 13, 1994 at reel 6851 frame 0749.

(2) Assignment from Fox Network Systems, Inc. to Cybex Computer Products Corporation, dated November 20, 1998, submitted for recordation to the United States Patent Office on December 15, 1998.

The undersigned has reviewed these attached documents and in accordance therewith, as well as on information and belief, believes title to the captioned patent to be vested in Cybex Computer Products Corporation and that Cybex Computer Products Corporation has the right to seek reissue.

Cybex Computer Products Corporation further requests that any reissue patent upon such application be granted to Cybex Computer Products Corporation in accordance with 37 CFR § 1.172(b).

ENGLISH-ABST:

A system and method for accessing, controlling and monitoring a data processing device in which a video raster signal from the data processing device is analyzed to determine the information displayed on a video display monitor attached to the data processing device is used. The video raster signal is converted to a digital form and a cyclic redundancy check is performed on the digital data to determine the information contained in the video raster signal and to generate a compressed representation of that information. The information may then easily and quickly be transmitted to a remote location for analysis and review. Additionally, commands from the remote location can be transmitted to the system to control the data processing device.
